

## **Data description**

The file ‘mortality\_1986-2015\_selection’ contains the raw data as we obtained them from Statistics Netherlands (CBS).

Relevant are the columns:

C born in The Netherlands or abroad

D gender

F year of death

G age at death in days.

The files ‘ages 1986-2015 - women’ and ‘ages 1986-2015 - men’ present the data in a form more suitable for our project. In each file, the 30 columns (A-AD) contain the relevant ages of death in days for the years of death 1986-2015, for women and for men respectively.
